

1. The given images are from day 0 to 12 ,as days are increasing wound size is decreasing
2. For day 0 and day 4 skewness and kurtosis are low because pixels are in the neighborhood of mean.
3. In day 8 and 12 kurtosis height is high because the wound size is low
4. In day 8 and 12 the mean is gone very low ,mean is nothing but sum of samples by count of samples here as days increasing size of wound is decreasing so points are also decreases so mean also largely decreased
5. In day 8 and day 12 energy is and in day 0 to day 4 energy is low/.
